Capability Statement — Logistics Dispatch Service

AI-Driven Freight Dispatch, Route Optimization & Carrier Operations

Sector: logistics_transport | OPCO: LOGISTICS-TRANSPORT | Status: development

Logistics Dispatch Service

High-efficiency load matching, route optimization, and carrier communications.

COMPANY OVERVIEW

Logistics Dispatch Service provides logistics coordination, carrier dispatching, and route optimization services. By utilizing AI scheduling, digital load-board crawling, and automated driver communication channels, we help owner-operators and shippers coordinate loads, optimize mileage, and eliminate empty backhauls.

CORE COMPETENCIES

- AI Load Board Scraping & Matching — Real-time crawling of major freight networks to find the highest-paying loads
- Route Optimization & Fuel Auditing — Sub-second route scheduling to minimize deadhead miles and fuel usage
- Automated Driver Dispatching — Real-time booking confirmations and directions sent to drivers via SMS/WhatsApp
- OCR Document Processing — Instant extraction of Bills of Lading (BOL) and Rate Confirmations

DIFFERENTIATORS

- Backhaul Optimization — Dynamic route planning that books return loads before the driver departs, securing profit in both directions
- Instant rate sheet extraction — Rate confirmation documents (PDF) are parsed via AI OCR in under 10 seconds to detect payment discrepancies
- M/W/SB Subcontracting Support — Aligned with minority/women goals to help primes meet local transportation quota targets
- 24/7 Dispatch Monitoring — Automation scripts running load health checks continuously on scheduling servers

COMPANY DATA

Field	Value
-----	-----

Legal name	Logistics Dispatch Service
Owner / principal	Winners Circle WC LLC
Sector	Logistics & Transport
Venture ID	LT-003-Logistics-Dispatch-Service
Primary Stack	temporal-worker · python-shutil · paddle-ocr · postgresql
Core Capabilities	scheduling · notifications · analytics · ocr

LOG Sales Scripts — Dispatch & Logistics Outreach

Use: Acquiring owner-operators, freight brokers, and shippers for route optimization and dispatch services.
Pairs with: `LOG-CAPABILITY-STATEMENT.md` · `LOG-FORMATION-CREDENTIAL-TRACKER.md`.

1) COLD CALL SCRIPT (carrier / owner-operator)

> "Hi [Name], this is [Rep Name] with Logistics Dispatch Service. I'm calling because we work with local carriers and owner-operators running out of the Charlotte region to find higher-paying loads and eliminate empty backhauls. I'm not selling load board subscriptions—we actually run an automated dispatch bot that tracks load rates daily. We put together a list of the 3 highest-paying freight lanes leaving NC this week. Can I text or email that lane list to you?"

2) EMAIL SEQUENCE

Touch 1 — Lane Rate List (Day 0)

Subject: High-paying freight lanes leaving NC this week

> Hi [Name],

>

> Running empty backhauls or hauling cheap freight is the fastest way to bleed money in today's trucking market.

>

> We specialize in AI-Automated dispatching and load matching that:

> • Crawls multiple networks to book the highest-paying loads automatically

> • Chains return loads (backhauls) before you dump the first load

> • Parses Rate Con sheets via OCR in seconds to catch hidden broker fees

>

> Lane list attached. Do you have 5 minutes to see how much we can improve your revenue per mile this month?

>

> Best,

> [Rep Name] · Logistics Dispatch Service

3) QUALIFYING QUESTIONS

1. What is your average deadhead percentage?

2. How do you find and book return loads today?

3. What is your current target rate per mile?

3. Formation & Credentials

LOG Formation & Credential Tracker — Logistics & Transport

Sector: Logistics & Transport · Holdings: Winners Circle WC LLC

1) ENTITY REGISTRATION

Legal Status: development (e.g. DBA skin under Winners Circle WC LLC)

EIN: On file (assigned under parent Winners Circle WC LLC)

FMCSA MC Number (Motor Carrier Number): [MC Number or Pending]

USDOT Number: [USDOT or Pending]

SCAC Code (Standard Carrier Alpha Code): [SCAC or Pending]

2) LOGISTICS INFRASTRUCTURE

DAT Directory & Loadboard API Access: [Status / Keys configured]

Truckstop Integration Status: [Status / Active]

OCR Invoice Processing Path: `services/rate\_confirmation\_ocr.py`

SMS Dispatch Broker Gateway: Twilio API (SMS notifications)

3) ECOSYSTEM CHANNELS & DOMAIN LINKS

Dispatch Portal Endpoint: `https://dispatch.[domain]`

Vercel Driver Web App: `https://[id]-driver-tracker.vercel.app`

Shared DB Connection: PostgreSQL `twenty` (live drivers list)

4. AI Agent Communication & Protocols

Agent Workforces & Communication — Logistics Dispatch Service

Agent Collaboration & Communication Protocols

This document defines the interface schemas, channels, and workflow sequences used by corporate agents (`CEO`, `Finance`, `Developer`, `Operations`) to execute no-code business actions across the portfolio.

1. COMMUNICATION CHANNELS & INFRASTRUCTURE

Agents communicate asynchronously using two primary channels:

1. Shared Database (PostgreSQL - `twenty` / `iza\_os\_ventures`): Used to log long-term tasks, lead states, and execution histories.
2. Model Context Protocol (MCP) Message Gateway: Agents query Neo4j for registry lookups and command execution logs.

2. COLLABORATION INTERFACE SCHEMAS (JSON)

When an agent triggers another agent or logs progress, they MUST write a structured payload.

Handoff Payload (Task Delegation)

``json

{

"sender_agent": "CEO Agent",

"recipient_agent": "Developer Agent",

"timestamp": "2026-07-19T21:10:00Z",

"action": "SPAWN_VENTURE",

"parameters": {

"venture_id": "ECO-111",

"venture_name": "Miss Toys",

"capabilities": ["storefront", "payments", "inventory"]

```
},  
"priority": "HIGH",  
"callback_endpoint": "/api/agent/callback"  
}  
```
```

### Execution Status Update

```
```json  
{  
  "task_id": "task-spawner-111",  
  "agent": "Developer Agent",  
  "status": "SUCCESS",  
  "timestamp": "2026-07-19T21:10:05Z",  
  "output_log_uri": "file:///Users/acebless/.../logs/task-111.log",  
  "metrics": {  
    "token_usage": 450,  
    "execution_time_ms": 3200  
  }  
}  
```
```

---

### ## 3. MULTI-AGENT WORKFLOW SEQUENCES

```
```mermaid  
sequenceDiagram

C->>O: Delegate CRM Sync & Automation Links  
O-->>C: Return twenty-CRM and n8n webhook channels  
C->>C: Update Neo4j Graph State -> Complete  
```
```

---

### ## 4. DEPARTMENTAL BOUNDARIES

CEO Agent: General strategy, milestone validation, and subagent orchestration.  
Finance Agent: Ledger accounting, tax preparation, and Plaid API reconciliation.  
Developer Agent: Code graph scans, database schema builds, and Vercel deployments.  
Operations Agent: n8n automated loops, Twilio dispatch channels, and Twenty CRM leads mapping.

## 5. Department Integrations

```
--- Metadata --- execution_metadata: venture_id: "LT-003-Logistics-Dispatch-Service"
agent_completed: "AG-CEO" department: "Operations & Logistics" node: "HW-AIR-01" database_link:

```

### # Departments & System Ecosystem — Logistics Dispatch Service

This document outlines the department boundary configurations and integration points to the central holding ecosystem.

---

#### ## 1. THE 4 CORE DEPARTMENTS

##### ### Department 1: Operations & Logistics

Responsible Agent: Operations Agent / CAO

System Boundaries: Coordinates the core execution loops (e.g. dispatch tracking, storefront catalog checks).

##### ### Department 2: Marketing & Growth

Responsible Agent: Operations Agent (CRM automations) / Marketing Agent

System Boundaries: Runs landing page intakes, email lists, and conversion funnel scans.

##### ### Department 3: Sales & Billing

Responsible Agent: Finance Agent / CFO

System Boundaries: Integrates Stripe billing nodes, manages client database pipelines, and reconciles invoicing ledgers.

##### ### Department 4: HR & Onboarding

Responsible Agent: Operations Agent

System Boundaries: Subcontractor background check logs and internal workforce onboarding.

---

#### ## 2. CENTRAL OS ECOSYSTEM INTEGRATION

Every active venture is interconnected with the centralized control plane:

- Shared Memory (Qdrant Vector DB): Syncs planning notes and repository symbol graphs.
- Ontology (Neo4j Graph): Joins `(Venture: LT-003-Logistics-Dispatch-Service)` to implementing code repositories.
- State Database (PostgreSQL): Reconciles transactional customer objects.
- Portals (VEX site): Automatically publishes metadata to the public portfolio directory.
